Glimpses of Programme Evaluations by Our Partners
Extracts from the Evaluation Reports

Capacity building of Government Officials: The project has also built the capacity of 44 officials of the Public Health department, social welfare and Tehsil Municipal Administration in designing and constructing accessible infrastructure for rural areas. As a result of the project interventions, the government education, health and social welfare departments have become more responsive to the needs of People with Disabilities and hence their services have become more accessible.1

Mobilisation of Funds through Local Administration: The project has successfully mobilized additional funding of PKR 109 million from other non-project sources to complement inclusive development through supporting activities in small village infrastructure sector, livelihoods and establishment of micro-enterprises for PWDs. An important aspect of non-project resource mobilization was contribution of PKR 5.44 million by local community members to match the funding from Local Government and UKAID project funds.2

Involvement of Women: The project through social mobilization has succeeded in establishing 20 women groups in the target 20 villages. A total of 398 women became members of these groups. Out of these 53% were women survivors of violence (WSV).3

Community Activities: The project has been effective in establishing Citizen Community Boards (CCBs) and Women Organisations (WOs) that managed to implement 421 development projects. 28 of the CCBs and 1 WOs have been registered and have access to government funds.4

Multi-Pronged Approach: In order to mainstream disability in local development, the project has worked at five levels using social mobilization as a tool. The levels of interventions are at: a) individual person with Disability (PWD) b) family; c) village; d) Tehsil & District e) Provincial & National. Overall, the project’s multi-pronged strategy for community based rehabilitation of PWDs and their integration into the society has been successfully demonstrated 5.

Empowerment of Women Survivors of Violence: A project from other resources provided resource to the Women Survivors of Violence for small-scale business start-up. Clearly, this has helped in the shape of helping WSV set up small businesses and has proved quite successful as it directly improved the standing of the WSV in their household and eliminated or reduced the onslaught of violence and gave these women voice as well 6.
